**Search:** Precise Search using various parameters, can also be used to search properties in a particular area.

# Global Search

In this section user can use search for properties related public notices published in any district of Maharashtra by setting certain parameters and using filtered search or global search

**Global Search:** User can type in any keyword and the search will list all results matching the keyword

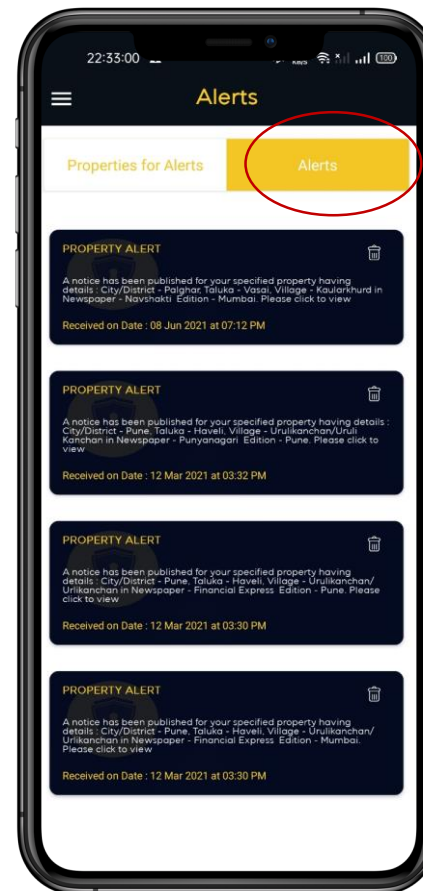

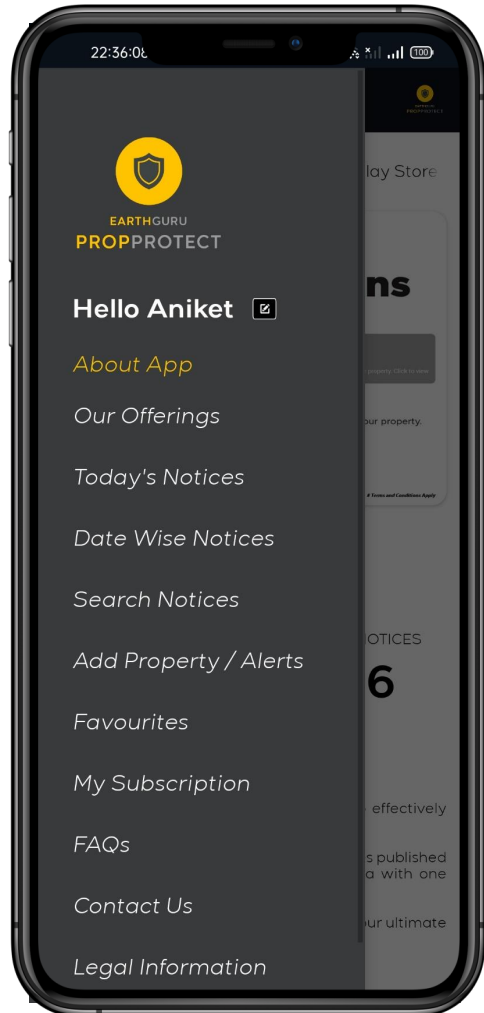

This is generalized search option where User is looking for a broader search. User in this scenario is looking for all the public notices published for a particular village, taluka eg. “Pune”

User can also use the share button to share a PDF of the published notice via any available app on the phone

# Add Properties/Alerts

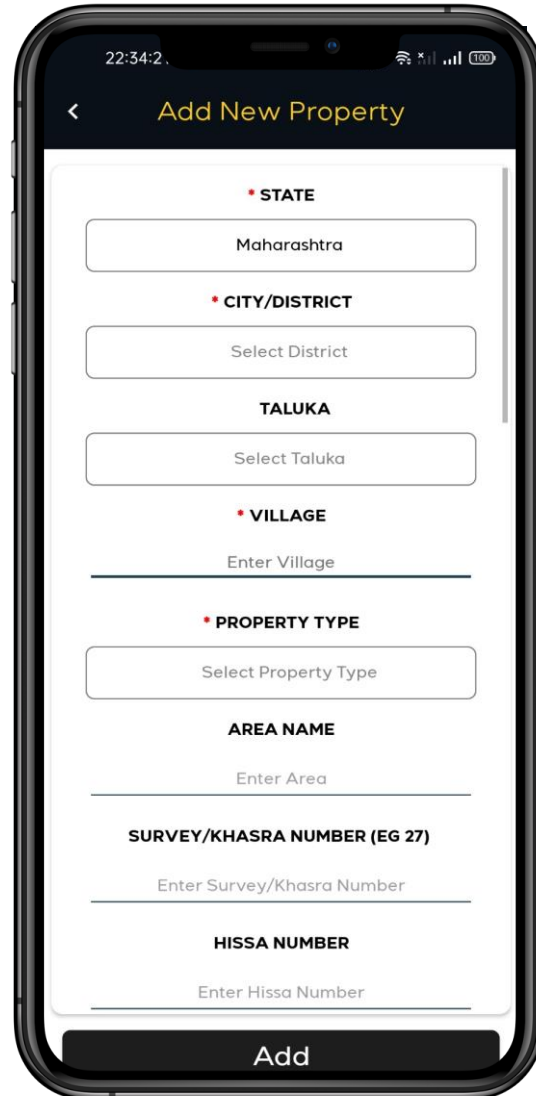

This Section gives user the ability to add his/her property for monitoring. The User Will be alerted via a push notification through email/sms whenever a public notice mentioning his/her property is published in the newspapers

In **Properties for Alerts** Sub-section, the users can see all the properties he has added for monitoring and add any new properties to the list based on the subscription Plan

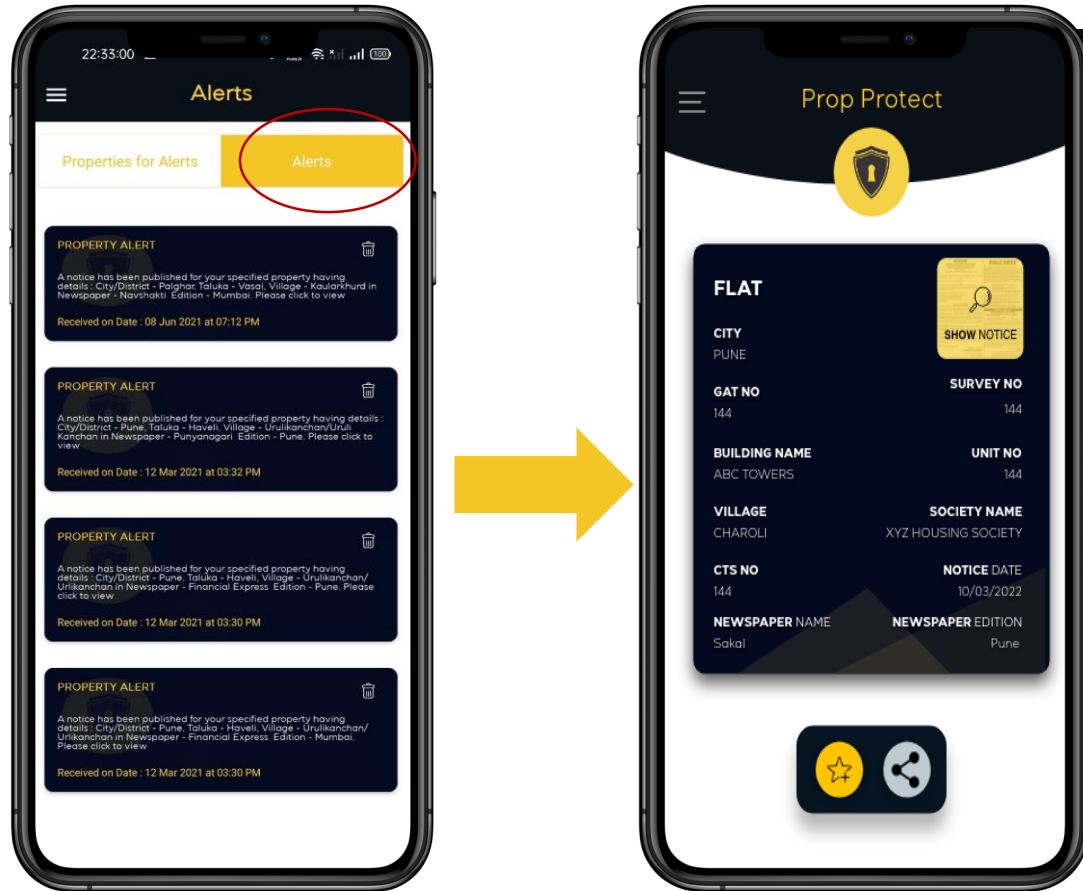

In **Alerts** Sub-section, the users can see all the past and current notifications for the list of properties being monitored

# Add New Property

User can click on Add New Property button to add a property for monitoring. After tapping on it they are presented with a form asking them all the information for the property. Once filled they can then tap on add button and the property will be added to the list

# Alerts

Whenever a notice for monitored properties is published user is notified via a push notification about the same. Once the user clicks on the push notification, the app opens on the Alerts section and user can see all the past and current Alerts. If a user taps on an alert card is then presented with details of the published notice
