# eNotice Ninja Pluss App Walkthrough

About App

Save Time, Money and Effort.

No need to buy and stock multiple newspapers when searching for notices or saving them.

Easily find your property notice.

Global and parameterized search options for finding property notices in significantly less time and money.

Never lose a property notice.

All historical and current data for all property notices is securely stored on the cloud, easily accessible whenever needed.

Welcome Screen gives a brief overview of the app to the user. Once the user clicks on the sandwich menu it takes the user to the app menu shown on the next slide.
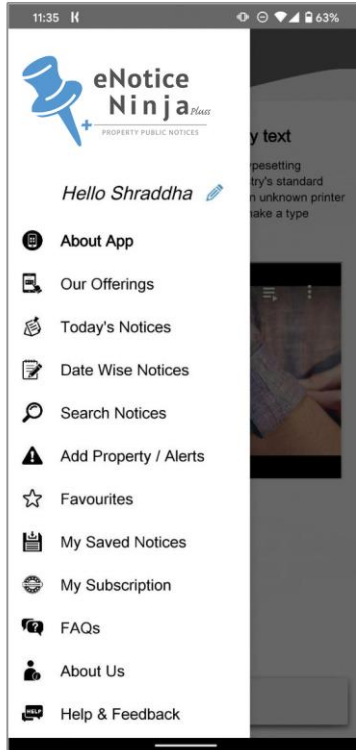

App menu introduces the user to all the available app modules the user can access and interact with.

Today's Notices

This section allows the user to access all the public notices related to properties published in the today's newspaper circulated in many cities
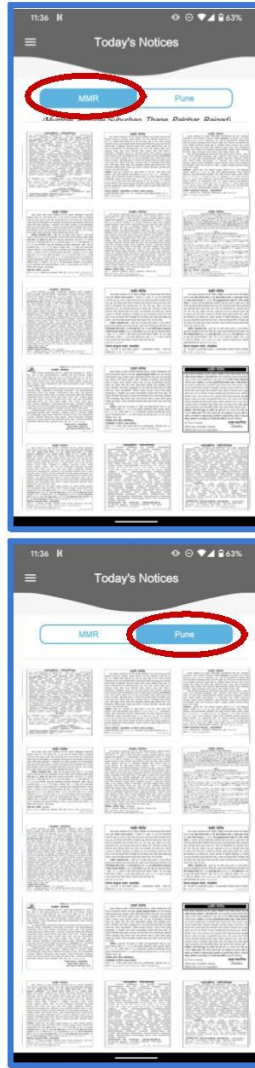

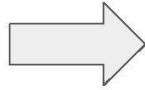

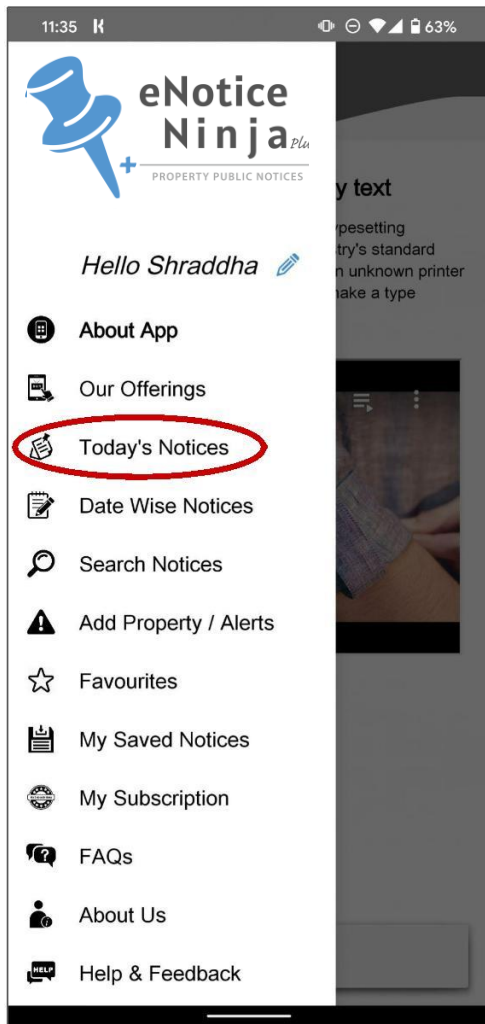

Once the user taps on "**Today's Notices**" it will take him/her to the Today's Notices section where he can view the public notices published in today's newspaper of selected City.
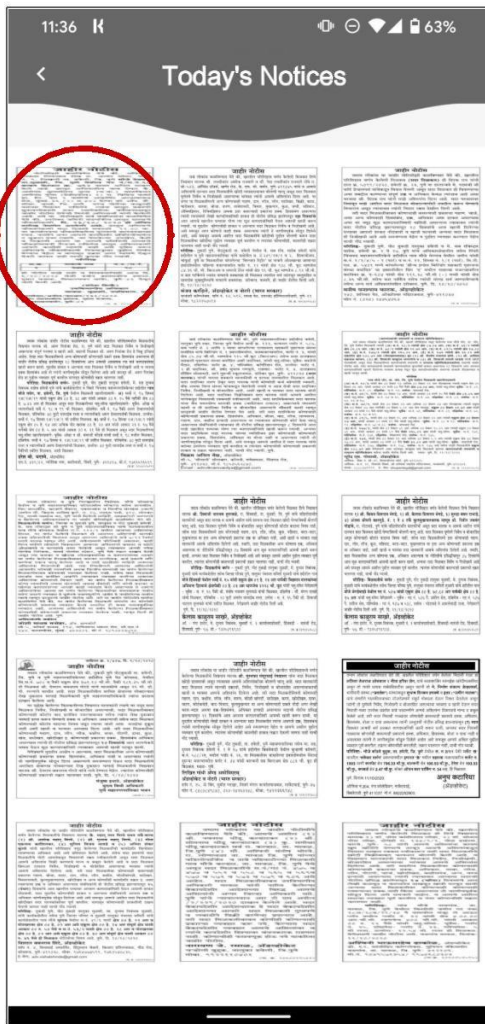

Once the user taps on a particular notice he wants to view it will expand the image where the user can ready the notice and also has an option to print it, if needed.
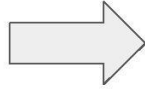

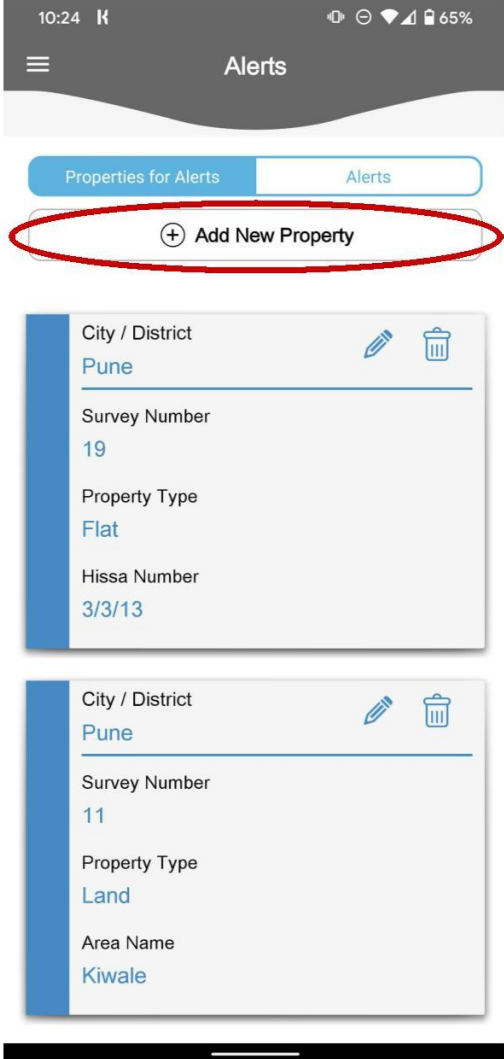

Add Property/Alerts

This section gives user the ability to add his/her property for monitoring. The user will be alerted via a push notification through email/sms whenever a public notice mentioning his/her property is published in the newspapers circulated in the MMR and Pune regions
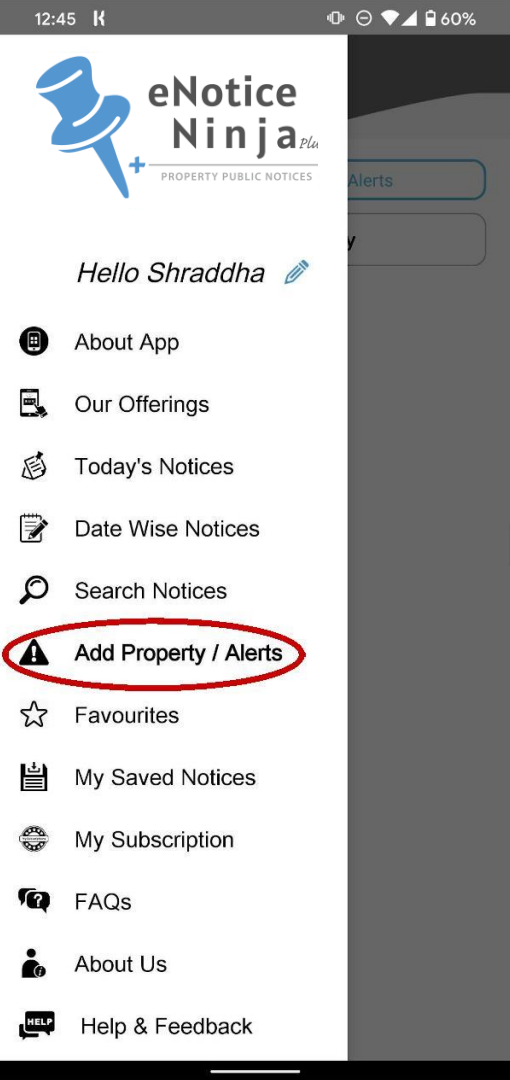

In the Properties for Alerts sub-section the users can see all the properties he has added for monitoring and add any new properties to the list based on the subscription plan
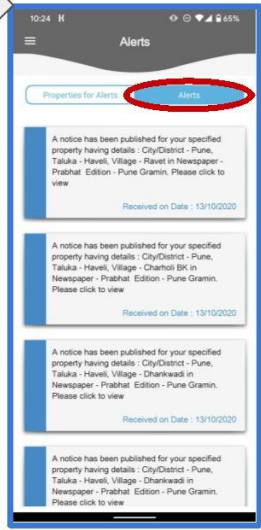

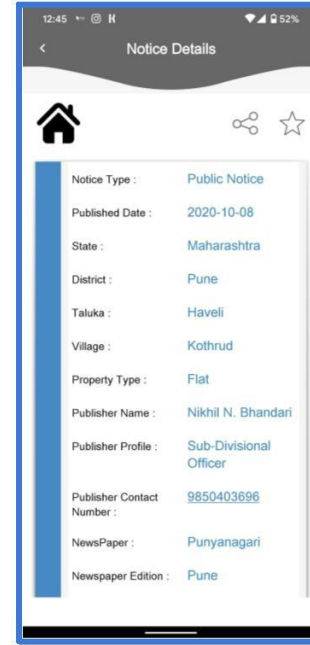

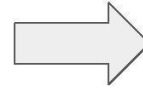

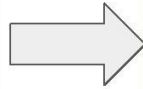

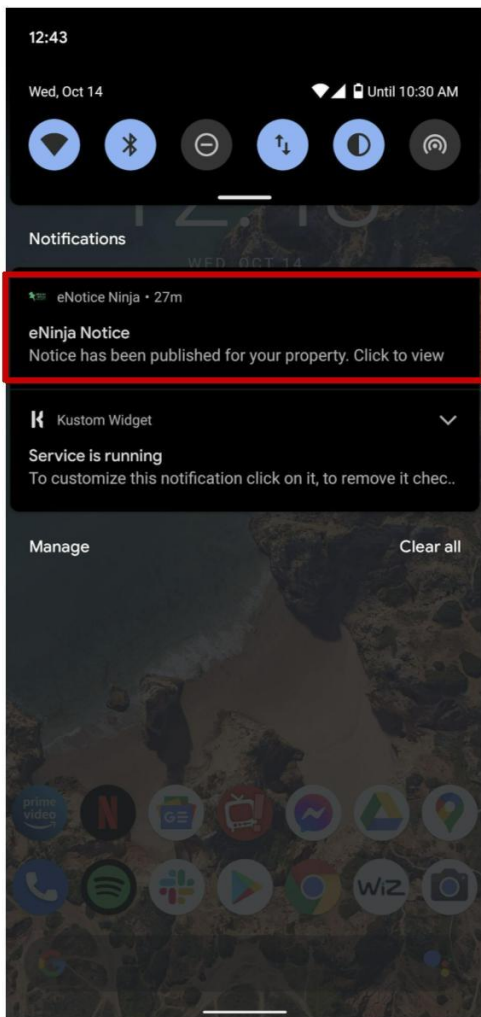

In the Alerts sub-section users can see all the past and current notifications for the list of properties being monitored

User can click on Add New Property button to add a property for monitoring. After tapping on it they are presented with a form asking them all the information for the property. Once filled they can then tap on add button and the property will be added to the list

Whenever a notice for monitored properties is published user is notified via a push notification about the same. Once the user clicks on the push notification, the app opens on the Alerts section and user can see all the past and current Alerts. If a user taps on an alert card he is then presented with details of the published notice.

Date Wise Notices

In this section user can search for property related public notices published between a certain date range for Mumbai and Pune region
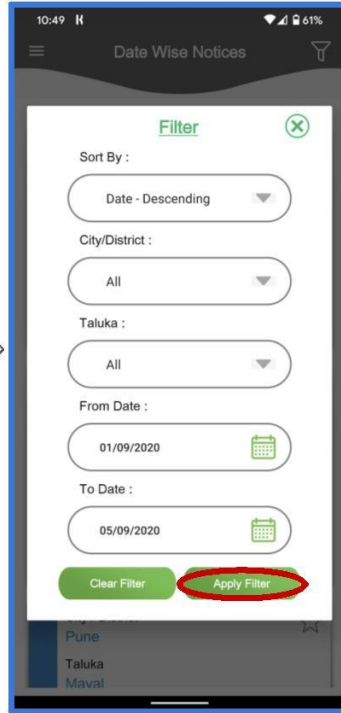

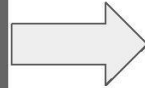

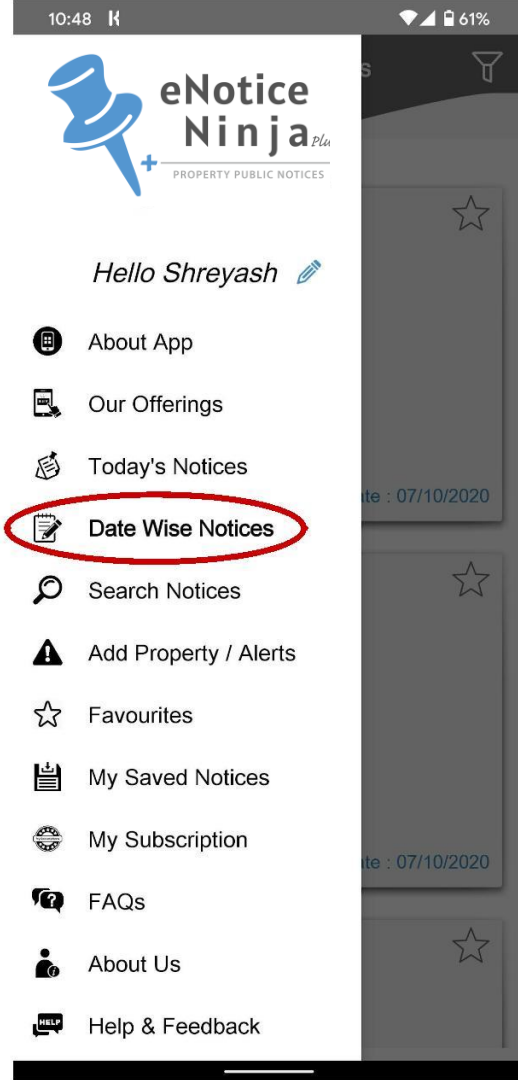

User can use this filter to search for notices published in City/District, Taluka and the Date Range. Once the user taps Apply Filter user will be shown notices matching this criteria
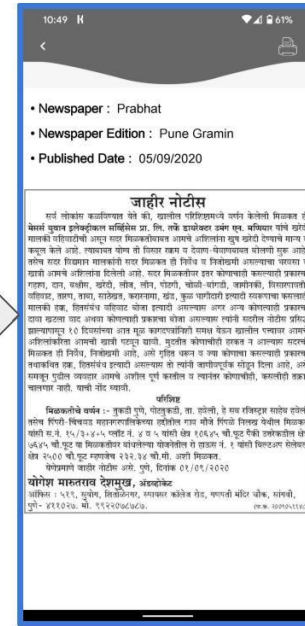

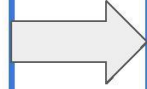

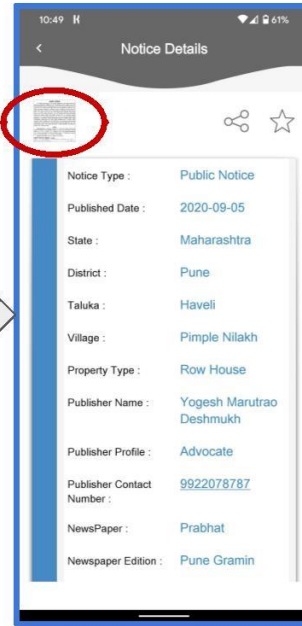

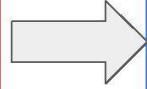

User can tap any of the card to view more information. He/she will then be presented with the Notice details screen where he can view the original notice published, share it or favorite it.

Search Notices

In this section user can use search for properties related public notices published in the MMR and Pune region by setting certain parameters and using filtered search or global search
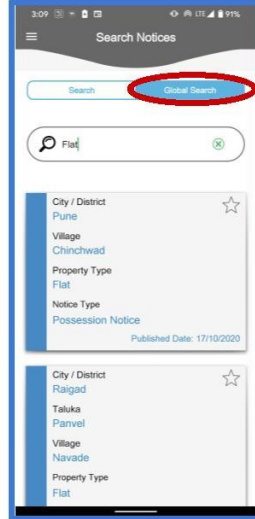

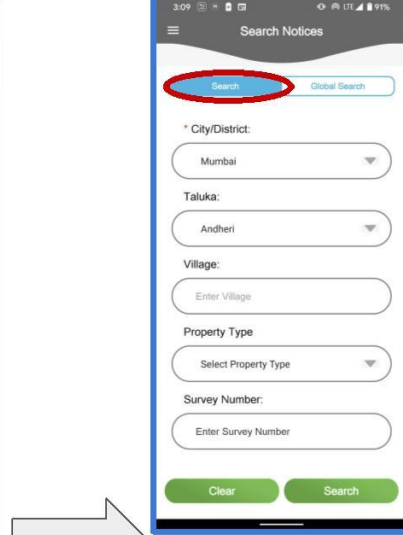

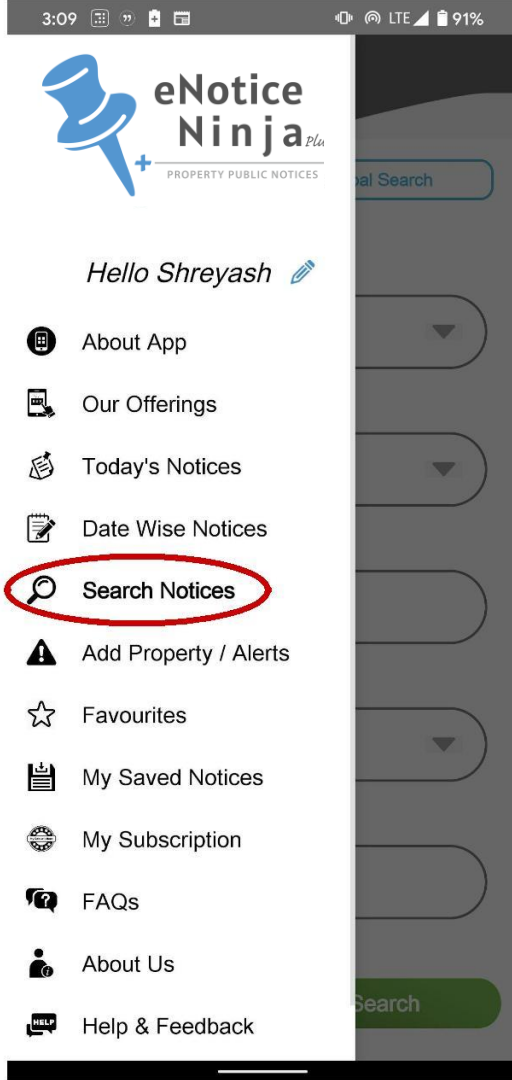

Search: User can use parameterized search to look up specific properties

Parameters such as city/district, taluka, village, property type, survey number, hissa number, T.P. number, CTS number, block number, F.P. number, area name, GLR survey number, GAT number, zone number, sector number, property number, plot number, unit number, building number, building name, wing number, society name and others

Global Search: User can type in any keyword and the search will list all results matching the keyword

16

User in this scenario is looking for all the public notices published for the Andheri, Mumbai region
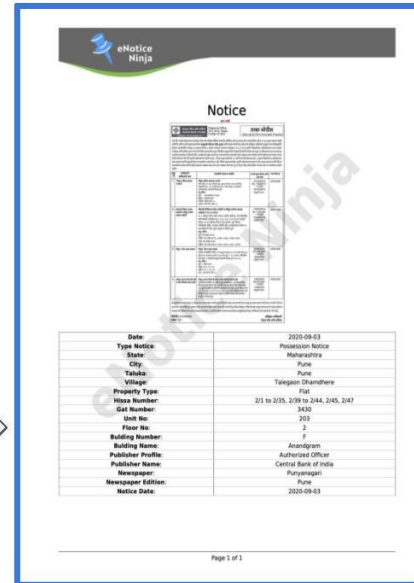

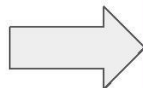

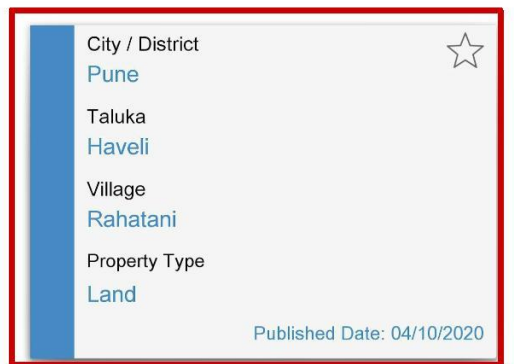

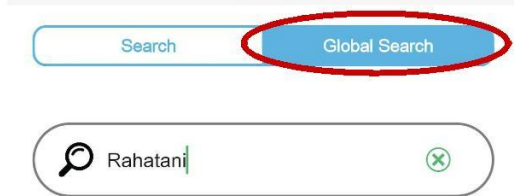

This is generalized search option where User is looking for a broader search. User in this scenario is looking for all the public notices published for a particular village, taluka eg. "Rahatani"

User can also use the share button to share a PDF of the published notice via any available app on the phone
